Project Description: Cognitive Graph Portfolio Optimiser (CGPO)

The Cognitive Graph Portfolio Optimizer (CGPO) is a novel decision-support system designed to enhance financial risk forecasting and portfolio management. It uniquely fuses firm-specific insights from multimodal data specifically earnings call audio and text with a systemic, graph-based view of asset interdependencies. The system utilizes a Reinforcement Learning (RL) agent to analyze these dynamic market structures and provide optimized portfolio rebalancing recommendations.

Tasks Done:

Planning & Scheduling:

- Received official project submission dates.
- Created Gantt Chart aligning development with Jan 3rd UI Submission and Jan 10th Coding Stage 1 deadline.
- Submitted Group Info (Solo) via Google Sheets.
